To: All Insurance Carriers

Re: Online Insurance Verification System

47 O.S., Section 7-600.2, (commonly known as HB 3115) requires the Department of Public Safety to create an online insurance verification system in order to verify whether a vehicle is in compliance with Oklahoma’s compulsory liability insurance law.

The Department of Public Safety (DPS) has completed its portion of the Web service required to accomplish this system. Because of our ability to develop this system in-house, the RFP previously prepared has been cancelled.

DPS is now ready to bring each insurance carrier into the system for pilot testing and to implement its participation in the system as soon as both parties are satisfied with the pilot testing, the method of query, and the transmission of data.

DPS proposes several methodologies for insurance carriers to choose from to query and transmit data:

- Query the insurance carrier’s Web service which comports to the specifications in "Model User Guide for Implementing Online Insurance Verification" of the IICMVA
- Query the insurance carrier’s Web service or other database which meets other specifications than those prescribed by IICMVA
- Provide a DPS-maintained database into which information is passed from the insurance carrier on a regular periodic basis
- A unique methodology tailored to the insurance carrier’s database and business plan

To answer any questions and to begin your company's process of integration into the online insurance verification system, please contact Ken Demers, Director of Information Systems for the Oklahoma Department of Public Safety, at (405) 425-2223 or kdemers@dps.state.ok.us.

DPS stands ready to serve the insurance industry and the citizens of Oklahoma by providing a state-of-the-art, flexible, functional, and easily modifiable online insurance verification system.

Sincerely,

Kevin L. Ward
Commissioner of Public Safety
